OPTIME DE HOC LIBRO MERITAE

S·P·DD·EDITORES

PRAEFATIO

Desiderari nobis uisus est conspectus plenus atque integer uerborum Gai Suetoni Tranquilli certae fidei operum ad recentiores editiones auctoris accommodatus, qui et curiosis Suetoni generis dicendi et historiae studiosis fortasse usui esset. Priora enim opera huius modi quamuis praestantia, delectum tantum exemplorum praebent, et ad fidem uetustiorum editionum confecta saepius uirorum doctorum coniecturas aut deteriorum codicum lectiones exhibent.

Indicem igitur confecimus uitarum duodecim Caesarum, textum secuti editionis maioris Maximiliani Ihm, cui addidimus lectiones libellorum de Grammaticis et de Rhetoribus uitarumque Terenti, Horati, Lucani ex editione Caroli Roth, quam editioni Reifferscheidianae praetulimus ut propius ad codicum fidem accedentem. Exempla omnia cuiusque uerbi in his operibus reperti in indice notauimus. Cetera excerpta et fragmenta uulgo Suetonio attributa incertiora esse duximus quam ut fidenter accipi deberent, quamquam sine dubio pleraque in iis continentur ex scriptis Suetoni delibata, nec a genere eius dicendi plane abhorrentia.

Capitum distributionem editionis Ihmianae in uitis Caesarum excutiendis seruauimus numerisque minusculis capitum numeris subiunctis particulas indicauimus. Minorum operum capitum distributionem ipsi confecimus, cuius conspectum ad paginas editionis Rothianae conlatae ad finem huius praefationis adiecimus.

Codicum auctoritatem, quamquam ad manum nobis erant collationes propriae omnium ab Ihm adhibitorum aliorumque nonnullorum, sicut Cantabrigiensis Kk 5, 24, Dunelmensis C. III. 18, Sionensium duorum, Suessionensis 19, Laurentiani 64, 8, nisi parcius non inuocauimus, ne liber tali materia immoderatius oneraretur. Consensum tamen codicum ab editoribus reiectum plerumque designauimus, aut expresse aut per formulam scribendi infra depictam.

Formulam rationemque scribendi ab Ihm institutam custodiuimus, retentis, quo melius praestantiorum codicum lectiones ostenderentur, uncis et quadratis et hamatis quibus indicantur litterae uerbaque aut omittenda aut ab editore suppleta, quae quidem scribendi ratio indici nobis potius quam textui editionis conuenire uidetur. Eadem de causa uarietates orthographiae ubique ostendimus, etiamsi uix nobis credibile uidetur Suetonium ipsum, grammaticae studio deditum, ita in scribendo uariasse ut plerasque formas eiusdem uerbi usitatissimi usurparit.

Nomina propria quorum formae et titulis et usu confirmatae sunt aliquanto liberius tractauimus, id est omissis uncis, exempli gratia nomen Ahenobarbi, quod semel tantum in codice Memmiano h litteram exhibet, in ceteris codicibus nusquam. Similiter formas nonnullas in textu Rothiano, sicut *adolescens, epistola,* negleximus rationemque editionis Ihmianae seruantes ad recentiorem normam omnes reuocauimus.

Numeris inclinatis ea indicauimus quae recta oratione ex scriptis aut locutionibus aliorum a Suetonio adlata sunt, sed et uerba singula nonnulla quae aliis attributa Suetonio ipsi aliena sunt; quae autem oratione obliqua in textu exprimuntur, ut fortasse uerba auctoris ipsius aliorum sententias interpretantis accepimus, praesertim cum adnotassemus easdem sententias apud alios scriptores adlatas aut uerbis aut ordine uerborum inter se discrepare.

Numeros qui uerbis singulis in textu exprimuntur, etiam aduerbia sicut *tricies, milies,* et similia, quae omnia fere per compendium scribuntur, suis locis in indice adsignauimus; ceteros in unum conlatos sub uerbo *numerus* ordinauimus.

Graeca praeter uerba singula quae apud Suetonium leguntur seorsum ad finem indicis protulimus; nihil quidem ad usum pertinent Suetoni, puri sermonis amatoris, qui uix unum et alterum uerbum Graecum Latinis inserit, nec illud ut cogitationis laborem effugeret. Verba singula Graeca in indice ordinantur.

Acies, bella, clades, flumina, gentes, insulae, leges, montes, templa, triumphi, uictoriae, multaque eiusmodi nomina aut adiectiuis propriis aut aliis indiciis notata sub uerbis *acies, bellum,* reliquisque ordinata inuenientur; tituli librorum sub uerbo *titulus;* nomina propria sub nominibus gentilicis; adiectiua propria plerum-

que iterata, semel loco suo et iterum sub nominibus cum quibus coniunguntur.

Quod ad proprietates dictionis Suetonianae attinet, rem sane difficillimam, medium adfectauimus cursum, non omnia communi iam usu optimorum scriptorum satis confirmata adferendo, sed ea praesertim quae et usum auctoris illustrarent et artem qua partes sententiarum inter se nectit. Qua de causa aduerbiorum temporalium, coniunctionum, praepositionum, pronominum usus uarietatem distinguere adgressi sumus nec minus ordinem distributionemque horum uerborum, ueriti etiam ne indigesta moles exemplorum fastidium tantum moueret, nec usui alicui seruiret.

Omnibus qui nos in indice edendo aut consilio aut opera censoria aut alioqui adiuuarunt gratias maximas agimus, praesertim collegis nostris G. L. Kittredge, J. D. M. Ford, E. K. Rand, nec minus Typographei Academiae Haruardianae antistitibus, qui summa liberalitate sumptus huius libri susceperunt.
